

Hyonah Lim

임현아

Full-stack Developer · Seoul, Korea

A full-stack developer building security AI, commerce, payments, SaaS, and kiosks — web services of many shapes — end to end

mmyonaa.github.io apddfhsajrkw@gmail.com github.com/mmyonaa linkedin.com/in/hyona-lim

ABOUT

A full-stack developer who owns the entire service cycle — from requirements at the planning stage to deployment and operations. I work broadly across frontend, backend, and infrastructure, and care about the small details that shape usability. I have led many projects solo or in small teams, handling design, development, deployment, and on-site support myself. I dig into the essence of each requirement to propose structures that reduce technical debt, and collaborate across planning, design, and operations to fix recurring system problems.

SKILLS

Frontend	Vue 3 · React · Next.js · TypeScript · JavaScript · Pinia · vue-i18n · Tailwind CSS · SCSS · PWA
Backend	Node.js · Koa · Fastify · TypeORM · Prisma · PostgreSQL · OpenSearch · Kafka · OCSF · Redis · BullMQ
Infra · Tooling	AWS EC2 · S3 · SES · Nginx · Docker · PM2 · Grafana · Jest · vite-ssg
AI	LiteLLM · AI SDK · Multi-provider LLM

EXPERIENCE

Inbridge 인브릿지

2025.09 – Present

Full-stack Developer

SIEM Security AI Analysis Server

2025.09 – Present

A Fastify AI server that automatically analyzes SIEM security incidents. Led the design and development of the **multi-agent analysis pipeline** and the **LiteLLM gateway** (top committer on the repo).

- **Real-time ingestion → automated analysis pipeline**: per-vendor XDR telemetry (CrowdStrike, SentinelOne, Cortex XDR) normalized into the **OCSF** standard schema, received over Kafka and indexed into OpenSearch; the moment a record lands a Redis queue picks up the job and hands it to the multi-agent analysis below → ingestion/normalization is decoupled from analysis, so adding a vendor never touches the analysis layer and rising volume is absorbed by adding workers
- Designed the **multi-agent orchestrator (8 role-specific agents)**: incidents pulled off the queue are classified and prioritized by Triage, which sets the execution scope first (low priority is pruned); code-based agents (IOC/MITRE/Network) run in parallel to secure grounding evidence, an LLM agent (SecurityIntel) is invoked only when the verdict is still open, and Correlation synthesizes at the end
- Correlation **structured output**: kill-chain graph, threat score (0-100), and confidence (generateObject/zod), with compliance (ISMS-P, ISO 27001, GDPR) analysis in the background
- Real-time **SSE streaming** of analysis with progress tracking, plus a manual re-analysis API
- **Operational observability**: built Grafana dashboards for continuous monitoring of errors and traffic across the AI server and web platform
- **LiteLLM gateway consolidation**: removed per-provider SDK branches; moved fallback, per-provider semaphore concurrency, 429/5xx backoff, and token budgets into the gateway layer, with 10s-cached provider health
- **Multi-tenant models & BYOK**: model CRUD via the LiteLLM Admin API, virtual-key allow-list isolation, post-save verification, async BullMQ reports, and live/readiness health-endpoint split

Fastify · TypeScript · AI SDK · LiteLLM · Multi-provider LLM · BullMQ · Redis · Prisma · PostgreSQL

SIEM Security Operations Web Platform

2025.09 – Present

The **Next.js 15 full-stack web** of a multi-tenant SIEM platform, co-developed with the team — contributing across the full stack as one of the main contributors.

- **Next.js 15 App Router full-stack**: UI/server components + many API routes + Prisma multi-schema DB layer (PostgreSQL)
- **SIEM dashboard & incident/alert management**: severity and MITRE ATT&CK views, endpoint scan & network isolation, threat intelligence
- **AI report editor (BlockNote)**: custom blocks + block/table/character-level diff highlighting with preview, multilingual (KO/EN/JA) reports, and PDF (Puppeteer), DOCX, CSV/XLSX export
- **Data visualization**: Recharts dashboard charts + XY Flow/dagre kill-chain (MITRE ATT&CK) topology graph
- **Background jobs & scheduling**: BullMQ/Redis workers and cron — data retention, notifications, recurring-report automation
- **OpenSearch SIEM search** and real-time monitoring (SSE), AI-server (REST/SSE) integration

Next.js 15 · React · TypeScript · Tailwind · shadcn/ui · Prisma · PostgreSQL · BlockNote · Recharts · XY Flow · BullMQ · Redis · OpenSearch

Fampyy Inc. 팜피 주식회사

2023.07 – 2025.09

Full-stack Developer

eSIM Platform — Service · Kiosk · Admin

2023.11 – 2025.09

A key developer across an eSIM platform made up of the online service, kiosk, admin, and shared middleware (top committer in most areas).

- Global eSIM commerce (led the frontend architecture): multi-gateway payments — Paygent card (USD) + Google Pay / Apple Pay (JPY), a web/kiosk-shared checkout flow, and post-payment eSIM QR issuance with email delivery
- Led development of the backend middleware (Koa · TypeORM · PostgreSQL): role-hierarchy permissions (RBAC), advertising/inflow-partner settlement, and API integration with domestic and international eSIM suppliers (including a local supplier in China) — from product sourcing to orders, handling spec differences, auth, and character encoding
- Unattended kiosk (Japan-only stores, JPY; catalog covering 30+ countries): led the kiosk web (Vue PWA) and improved and extended the Android WebView app's hardware features — dual printer-driver auto-detection (SII ↔ Epson), Shift-JIS/UTF-8 multilingual encoding, and payment-terminal (card/QR/NFC) status/error handling — plus initial operations and real-time on-site support in Japan

Vue 3 · TypeScript · Pinia · vue-i18n · PWA · Koa · TypeORM · PostgreSQL · Kotlin · AWS

In-house SaaS Authoring Tool (apoc)

2023.07 – 2025.08

- Platform renewal: full interface overhaul and component-based refactoring for maintainability and extensibility
- Payment system: Toss/PayPal integration (one-time and recurring subscriptions), PayPal checkout-flow design, concern-separated payment/subscription/cancellation history tables (a unified multi-gateway ledger), auto-renewal batch, and Jest tests
- Authoring-tool tablet support (established the 768-1023px criteria): touch-UX fixes for screen zoom, layer scrolling, and canvas positioning — designing and running 61 test cases across 6 devices × 6 browsers, identifying and tracking 39 issues

Vue.js · Koa · PostgreSQL · Jest · SCSS

Client Content Service — National Institute of Ecology

2025.07 – 2025.08

- Participation-certification service: on-site talks verified by image recognition (staff code-entry fallback), cumulative tiers (3 talks = Sprout, 5 = Tree) with per-tier certificates, iframe content play, activity logging, and survey collection

Vue.js · Koa · PostgreSQL · Kakao API · Batch · SCSS

FREELANCE

Bogwang Theater Promotion & Booking Site

2025.04 –

A theater promotion and booking site completed solo — planning, design, development, and infrastructure.

- Theater browsing/reservations and admin content operations (performances, notices, banners)
- SEO optimization via vite-ssg SSG with dynamic meta/JSON-LD and a build-time sitemap (85 clicks, 330 impressions, 25.8% avg CTR, 4.1 avg position in the two months after the fix, Jul-Sep 2026)
- Deployed on AWS EC2/S3 with PM2/Nginx; ongoing sprints — 60+ fixes, security hardening, indexing recovery

Vue 3 · TypeScript · vite-ssg · Koa · PostgreSQL · AWS · Nginx

PERSONAL PROJECTS

blog-mcp · Blog Publishing MCP Server

2026.07 –

A learning project building an MCP (Model Context Protocol) server from scratch, aimed at auto-publishing blog posts.

- Hand-built stdio server implementing all three MCP primitives (Tool · Resource · Prompt)
- No-LLM pure-function principle — responsibilities split across trigger, orchestrator, and MCP server
- Deterministic publish gate — existence and shape checks on follows/related and in-body links block link hallucination
- Unattended publishing pipeline in production — a daily cron drives the orchestrator wrapper, gated by a PreToolUse hook
- Performance-signal feedback closes the content loop — view counts weight topic selection (cold-start gate, graceful degradation)

TypeScript · MCP · @modelcontextprotocol/sdk · zod · Astro · GitHub Actions

ACTIVITIES

Client-facing Product Presentations

2026.05 - 07

Covered the product overview, core capabilities, and business value, personally delivering an end-to-end demo — detection → AI analysis → response → report — with Q&A.

– Three SIEM demos & presentations — a global IT company (Korean, 2026.05) · a major-conglomerate subsidiary (English, 2026.06) · a major Korean conglomerate (Korean, 2026.07)

RSAC 2026 Attendance

2026.03

Attended the global security conference (RSA Conference) — researching the latest security trends and solutions.

EDUCATION

Ajou University · B.S. in Cyber Security

2020.03 - 2025.02

Completed the Cloud/Bigdata security track

LANGUAGES

Korean (native) · English — working proficiency; product demos & presentations in English
